

Ad Project – Due Friday, January 27, 2017

- You will make a poster out of your project
- Each coupon will be paired with one ad – ten coupons and ten ads total
- On your poster board, you will pair up the coupon with the ad, and calculate how much the item will cost when the coupon is applied (ignore sales tax)
 - Write next to the coupon & ad what the item will cost after the coupon is applied (round to the penny if necessary)
- Be creative! Part of your grade will be the overall presentation. How eye-catching is your poster?
- Your goal is to pair up the coupons in such a way that you save the most amount of money overall. Can you come up with a way of using the coupons so that you can save the maximum overall?
